Re: Beth-El Zikhron Ya'aqov Industries Ltd

To whom it may concern..

I hereby confirm that Beth-El Zikhron Ya'aqov Industries Ltd. is the only Israeli company recognized by the Home Front Command that develops and manufactures blast resistant nuclear, biological and chemical (NBC) protective equipment.

The Home Front Command cooperates on a close and exceptionally tight level with Beth-El Industries on all that relates to the collective protection of buildings and shelters (hospitals; child care facilities; power plants; elderly homes; etc.)

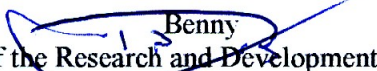

In addition to installations, Beth-El Industries performs testing on entire complexes in order to ensure compatibility with the necessary required protection standards (separate division ; air-tightness; and so on).

The Home Front Command is very pleased with the professionalism, quality and reliability of the products and services that Beth-El Industries has installed in thousands of governmental offices, industrial buildings, and private shelters. Furthermore, the majority of systems and equipment from Beth-El Industries comply with Standard number 4570 of the Standards Institution of Israel (SII) for ventilation and filtration, according to the certification of the SII.

For years the company has shown a full understanding of the Israeli population's need for protection and developed cutting edge products that meet the requirements of the Home Front Command.

In conclusion, I would like to emphasize the praiseworthy professional service provided by Beth El industries and their excellent connections with the Home Front Command.

With Kind Regards,

Major  Benny Brosh
Head of the Research and Development Department
